Abstract--Lithium-ion battery strings are important modules in battery packs. Due to cell variation, strings may have im-balanced state of charge levels, reducing pack capacity and exacerbating ...

Portable equipment needing higher voltages use battery packs with two or more cells connected in series. Figure 2 shows a battery pack with four 3.6V Li-ion cells in series, ...

A battery pack is a set of any number of battery cells connected and bound together to form a single unit with a specific configuration and dimensions. They may be configured in series, ...

Paralleling strings together greatly increases the complexity of managing the battery pack and should be avoided unless there is a specific reason to use this configuration.
