Does Algeria have a potential for solar PV and wind energy?

It is found and confirmed that Algeria has a huge potential of solar PV and wind energy, accounted to a maximum annual sum of 2.38 MWh/m<sup>2</sup>/year and 3.33 MWh/m<sup>2</sup>/year, respectively. Moderate complementarity levels are observed on the daily timescale in the coastal and highlands regions.

Is energy demand increasing in Algeria?

However, the energy sector in Algeria has to overcome other barriers, such as the increase of energy demand. In Fig. 2, the monthly load demand of Algeria is presented during the period from 2000 to 2019, where an increasing energy demand is observed from roughly 2 TWh to 8 TWh.

Are solar and wind resources synchronized?

Whereas, moderate synchronization of solar and wind resources is observed in the provinces of Tamanrasset, Tindouf (located in the west of Adrar province) and Illizi (in the north of Tamanrasset). In these regions, solar and wind are positively correlated and its complementarity index reaches a maximum of 0.36.

A globally interconnected solar-wind power system can meet future electricity demand while lowering costs, enhancing resilience, and supporting a stable, sustainable ...

To show the effectiveness and validity of the proposed strategy, various case studies have been simulated and presented in this work. A comparative study between some ...

Summary: Discover how the Algiers Grid Energy Storage Power Station revolutionizes energy management in North Africa. Explore its innovative technology, impact on renewable adoption, ...

The proposed project will combine wind, solar, battery energy storage and green hydrogen to help local industry decarbonise. It includes an option to expand the connection to 1,200MW. [pdf]
