ADW200 series multi-loop power meter is mainly used to measure all electrical parameters of a three-phase circuit. Colleagues can select the current input from up to four circuits.

By collecting and analyzing power consumption data during different time periods and seasons, operators can understand the energy consumption patterns of the base station, ...

Acrel base station energy consumption monitoring solution monitors the electricity load of each power distribution circuit through multi-circuit ...

According to the power system of base station. We can actually calculate that how many circuits we need to monitoring and set a compatible model selection plan for metering devices like AC ...
