Can solar panels be used on shipping containers?

Solar panels on shipping containers provide a smart and sustainable way to generate energy, for container homes, offices, or remote shipping container facilities. Overall, they are a great way to use the roof of a shipping container.

Should solar panels be protected during shipping?

Solar panels are expensive and valuable, so protecting them during the shipping process is necessary. Solar panels are typically stacked in a box or crate prior to shipping. They can be stacked horizontally or vertically, depending on the panel's dimensions.

Is freight shipping necessary for solar panels?

Solar panels often require freight shipping services due to their oversize dimensions and the need for careful packaging. Freight shipping solar panels involves protecting the fragile cargo from damage during transit and ensuring careful and on-time delivery. It takes the right freight partner to ensure solar panels are transported safely.

How do solar panels get shipped?

Solar panels, such as those manufactured in Taiwan, are typically shipped via ocean freight to Long Beach, California. Subsequently, they may be transported via full truckload shipping to a distributor's warehouse in Miami, Florida. Large solar panels, like those used on solar farms, might require oversize freight shipping services.
