-----

Vocarbon's carbon brushes are crafted from a proprietary carbon-graphite composite infused with reinforced polymers, tested to last 50% longer than industry-standard brushes.

Our range includes carbon fibers and semi-finished products based on glass and carbon fibers specially developed for the production of rotor blades. We are also developing tailored ...

Carbon brushes for wind turbines, engineered to ensure reliable conductivity, stable generator performance, and long-lasting durability in demanding renewable energy applications.

Find reliable bearing protection solutions for wind power applications. Enhance brush life, performance, and safety in wind turbines with our carbon products.
