Definition and Functionality: Base stations serve as the main communication points between mobile devices and the network. Their role is essential for reliable voice and data services.

When two 4g modem need to communicate, they first establish a connection based on the 4G network. This connection is facilitated by base stations within the 4G network, which act as ...

Backhaul Connection: The backhaul connection links the base station to the core network in the mobile communication system. It provides for the interchange of data between ...

Equipped with an electromagnetic wave antenna, often placed on a tall mast, the base station enables communication between mobile terminals (such as mobile phones or ...
