OverviewHistoryDesignEvaluationTraditional flow batteriesHybridOrganicOther typesA flow battery, or redox flow battery (after reduction-oxidation), is a type of electrochemical cell where chemical energy is provided by two chemical components dissolved in liquids that are pumped through the system on separate sides of a membrane. Ion transfer inside the cell (accompanied by current flow through an external circuit) occurs across the membrane while the liquids circulate in their respective spaces.

Flow batteries consist of several critical parts, each contributing to their overall performance: Electrolytes: The two most important elements of a flow battery are the positive ...
