Configures optimal, cost-effective behind-the-meter-storage and distributed generation systems based on the climate, building type, and utility rate structure of potential ...

In the Roadmap, Staff indicates that New York will need approximately 12 GW of energy storage by 2040 to support a decarbonized and reliable electric system.

This study proposes an innovative economic strategy utilizing battery energy storage system and electric vehicles cooperation to achieve voltage regulation in photovoltaic ...

In this paper, we studied the reliability assessment of the distribution network with power exchange from mobile energy storage units, considering the coupling differences ...
