Luckily, it's not hard to figure out how many solar panels to install. All you need to know is which numbers matter, and how to make them work for your home.

We estimate a typical home needs between 15 and 22 solar panels to cover 100% of its electricity usage.

Most homeowners need between 15-25 solar panels to power their entire home, but this number varies significantly based on your energy usage, location, and roof characteristics.

While it varies from home to home, US households typically need between 10 and 20 solar panels to fully offset how much electricity they use throughout the year. The goal of most solar ...
