---

Enter Finland's new energy storage trifecta: cryogenic liquid air systems, volcanic rock thermal batteries, and something called "sand batteries" (yes, really).

Merus Power has completed a significant energy storage facility in Lappeenranta, Finland, which began operations on May 15, 2025.

It is one of the largest energy storage facilities in use on the Finnish electricity market with an output of approximately 38 megawatts and energy of 43 megawatt hours.

A review of the current status of energy storage in Fi This is an electronic reprint of the original article. This reprint may differ from the original in pagination and typographic detail.
