This article presents the design and implementation of a solar fire detection system using a Wireless Sensor Node (WSN).

Using this GSM based forest fire detection and prevention system, temperature and smoke concentration of the forest area can be easily obtained. The system is low cost, simple and ...

Solar-powered surveillance systems are increasingly being deployed in forests to detect fires early, helping mitigate the damage ...

The system incorporates a temperature sensor, Bluetooth module, and intelligent battery charging management to provide real-time monitoring and early detection of forest fires, while also ...
