---

In a paper recently published in Nature Communications, the research team introduced a new type of carbon-based material that enables supercapacitors to store as much ...

A newly engineered graphene structure dramatically boosts the energy storage and power capabilities of supercapacitors.

When incorporated into energy storage devices called supercapacitors, this new form of graphene could be the key to high-capacity, fast-charging energy storage that could ...

This review presents a comprehensive examination of graphene-based materials and their application in next-generation energy storage technologies, including lithium-ion, ...
