How do solar-powered refrigerated containers work?

All applications are supplied exclusively with photovoltaic and wind generators. Through the integration of special energy storage systems, the cooling of the solar-powered refrigerated container remains active even without sunshine thus the stored goods or products remain cool or frozen.

What are solar-powered refrigerated containers used for?

Our solar-powered refrigerated containers are ideal as self-sufficient solutions for medicine, perishable goods or technical equipment. Our systems are in use 24/7 and have been developed especially for operation at high ambient temperatures of up to 52°C. All applications are supplied exclusively with photovoltaic and wind generators.

What is a solar refrigerated container?

The solar refrigerated containers have outer walls made of steel and an internal special thermal insulation system (insulation with double coating in a food-safe surface) for an extra low heat transfer coefficient. Due to their shape, the containers can easily be transported by ship or helicopter and can therefore be placed flexibly.

Our solar-powered ice maker, available in flake or block ice configurations, provides continuous ice production and storage 24/7. It is a versatile ...

From cutting-edge solar technology to scalable storage systems, this article explores industry trends, real-world applications, and data-driven insights to help businesses and communities ...

So what's the big deal with these containers? Well, imagine a standard refrigerated shipping container. Now picture it running efficiently on clean, renewable solar power instead of ...

Imagine a container that keeps vaccines stable in the Sahara Desert using only sunlight. Solar powered refrigerated containers are revolutionizing how we preserve temperature-sensitive ...
