Will New York City's battery-swapping cabinet prevent fires from lithium-ion batteries?

The battery-swapping cabinet is only one part of New York City's efforts to prevent fires from lithium-ion batteries, which power the e-bikes and e-scooters that have flooded city streets in recent years. The batteries have also become deadly fire hazards.

Are battery cabinets revocable consent?

A proposed new rule from the city offers some good news, allowing battery cabinets to fall under "revocable consent". Once taking effect - likely in mid to late 2025 - local businesses including bodegas, grocery stores and restaurants could request to have battery cabinets installed outside of their doors.

How far apart should batteries be stacked?

Do not stack batteries. Maintain a separation distance between devices or batteries that are charging in a single fire area. 20 kilowatt-hours (kWh) requires at least a 2-foot separation. 50 kWh requires at least a 3-foot separation. Consider using an approved cabinet or rack to reduce these separation distances.

What is the battery energy storage system guidebook?

A public benefit corporation, NYSERDA has been advancing energy solutions and working to protect the environment since 1975. The Battery Energy Storage System Guidebook contains information, tools, and step-by-step instructions to support local governments managing battery energy storage system development in their communities.

Co-founder David Hammer added, "With FDNY approval, we're ready to roll out cabinets immediately. Each battery charged in our ...

For the New York pilot, Popwheels is building battery cabinets in several locations throughout the city that will include 16 charging slots for e-bike batteries. Riders will open a ...
