In this paper, particle swarm optimization algorithm is used to optimize the energy storage and capacity planning of distribution network. The experimental results show that this ...

We develop a system dynamics (SD) model and simulate an IDN case study to evaluate PV-ES project performance across multiple dimensions including capacity expansion, ...

Summary of the key points related to the incremental and strategic planning approaches for investments in the infrastructure of electricity grids.

With the accelerated transformation of a low-carbon energy system and the development of the digital industry, distributed energy resources (DERs) such as solar ...
