---

By adding a voltage multiplier network at the DC side of the traditional three-phase inverter topology, the DC-link voltage of the introduced inverter is stepped up to triple of the ...

In this mode, the inverter either injects or absorbs a constant amount of reactive power, independent of real power output, depending upon its setting. The inverter appears to ...

Like normal mode, the inverter will not take over or correct the voltage or frequency until either or both fall outside the pre-specified usable range. The acceptable range is wider and there is up ...

By adding a voltage multiplier network at the DC side of the traditional three-phase inverter topology, the DC-link voltage of the ...
