-----

Super capacitor (Electro-chemical capacitor) consists of two electrodes (made from metal coated with a porous substance like powdery activated carbon) separated by an ion ...

Leader of capacitor manufacturing in CIS countries, it produces a wide range of energy-saving equipment: from individual low-voltage (up to 1000 V) and high-voltage (1 - 24 kV) power factor ...

Leader of capacitor manufacturing in CIS countries, it produces a wide range of energy-saving equipment: from individual low-voltage (up to 1000 V) ...

A supercapacitor is a high-capacity capacitor with capacitance values much higher than other capacitors (but lower voltage limits) that bridge the gap between electrolytic capacitors and ...
