Are Clipsal circuit breakers & main switches easy to install?

Our wide range of Clipsal Circuit Breakers & Main Switches adhere to Australian standards of performance and are quite easy to install. Clipsal products are well-renowned in Australia for their great quality built and ease of installation. These Clipsal Circuit Breakers & Main Switches are designed with a 6kA breaking capacity.

What is the difference between a main switch and a circuit breaker?

A main switch (or isolator) is designed purely to switch power on and off manually--it does not provide overcurrent protection. A circuit breaker automatically trips during overload or fault conditions to protect circuits. Main switches are used for isolation during maintenance and servicing, allowing electricians to safely de-energise circuits.

Do you need a small circuit breaker?

Whether you need a small circuit breaker (MCB) for home protection or residual current devices (RCDs) for advanced protection against electric shocks, we have the perfect solution for you. You can also get main switches to separate the entire electrical installation.
