SPIDERWG initially set out to provide guidance regarding the aggregate impacts of a distributed energy resource (DER) on under voltage load shedding (UVLS) programs.

Clean energy and energy storage systems need to be connected to the distribution grid through a process known as interconnection. As the number of installations rapidly ...

The scope of this roadmap encompasses DERs that require interconnection and primarily provide electricity to consumers, such as distributed solar photovoltaics (PV), distributed wind, and ...

Performance-based incentive programs should allow utilities to dispatch enrolled energy storage systems during peak hours, either directly or through a third party. Power export should be ...
