Most modern power stations, including Pisen's models, use lithium batteries, which typically last 500 to 1,000 charge cycles (battery cycle life) before their capacity drops to ...

What's the difference between cycle life and calendar life? Cycle life refers to charge/discharge cycles (typically 500-6,500 depending on battery type), while calendar life is ...

The life expectancy of a portable power station's battery is typically measured in charge cycles. One cycle refers to using the battery from 100% to 0% and recharging it fully.

Most portable power stations rely on either Lithium-Ion (Li-ion) or Lithium Iron Phosphate (LiFePO4) batteries. Li-ion batteries are common and can last anywhere from 500 to 1,000 ...
