What is Poland doing about energy storage?

Poland has just rolled out one of Europe's most ambitious energy storage programmes- a EUR980 million initiative that's set to transform the country's grid infrastructure. The Polish Ministry of Climate and Environment has finalised this landmark subsidy scheme, targeting over 5 GWh of new storage capacity by 2028.

What is Poland's new energy storage scheme?

The scheme has been brewing since 2024, with the final regulation published in the Journal of Laws of the Republic of Poland in March this year. It received European Commission approval, which authorised state aid of EUR1.2 billion in state aid to support at least 5.4 GWh of new electricity storage facilities.

How much power does a project need in Poland?

Eligible projects must have a capacity of at least 2 MW/4 MWh, connected to the distribution and transmission network at all voltage levels. The scheme has been brewing since 2024, with the final regulation published in the Journal of Laws of the Republic of Poland in March this year.

Does Poland need a long-duration storage system?

Due for Q1 2026 completion, this project's 800MWh per site configuration directly addresses Poland's need for long-duration storage solutions beyond typical 4-hour systems. LCP Delta's latest analysis paints a rollercoaster trajectory for Polish BESS deployment : This J-curve reflects the 2-3 year lead time for capacity market projects.
