What is the difference between an RCBO and a circuit breaker?

The main difference between an RCBO and a circuit breaker (specifically an MCB) is their protection focus. An MCB protects a circuit against damage from overcurrents only, while an RCBO provides that same overcurrent protection plus protection from earth leakage, safeguarding against electric shocks.

What is the difference between RCCB and RCBO?

An RCCB (Residual Current Circuit Breaker) provides exclusive earth leakage protection, meaning it guards against electric shock. In contrast, an RCBO (Residual Current Circuit Breaker with Overcurrent Protection) combines that functionality with built-in overcurrent protection.

Where can I find RCBO GFCI AFDD circuit breakers?

Find a huge range of RCBO, RCD, GFCI, AFDD Circuit Breakers at element14 New Zealand. We stock a large selection of RCBO, RCD, GFCI, AFDD Circuit Breakers, including new and most popular products from the world's top manufacturers including: Schneider Electric, Abb, Siemens, Eaton Moeller & Broyce Control Information unavailable.

What is a miniature circuit breaker?

The MCB, or miniature circuit breaker, is an electrical switch integrated for the automatic protection of the electrical circuit from damage as a result of overcurrent. It automatically stops the flow of electricity through the circuit upon detection of a fault.

As a premier supplier and distributor of high-quality circuit breakers in NZ, RS New Zealand offers a wide selection of RCBO breakers for sale at competitive prices.

Buy RCBO, RCD, GFCI, AFDD Circuit Breakers. element14 New Zealand offers fast quotes, same day dispatch, fast delivery, wide inventory, datasheets & technical support.

Shop for Residual current circuit breakers, mini circuit breakers, Main switch circuit breaker and more... Trade Depot - Always Low Prices - NZ Wide Delivery.
