---

Onsite energy refers to electric and thermal energy generation and storage technologies that are physically located at a facility and provide alternative energy services directly to the site.

Reduce utility costs, achieve energy independence and meet sustainability goals with renewable on-site solar power-and even sell surplus energy back to the grid.

We assess the feasibility of each renewable energy option (both onsite and offsite) and provide recommendations on which would best achieve your desired results.

Onsite solar is an asset located where the renewable energy generated will also be consumed. There are three main types of onsite solar: rooftop, ground-mount, and carport.
