Tempering: Glass is heat-treated by heating annealed glass to ~620°C and then rapidly cooling by airflow. As a result, tempered glass is about 4 times stronger than annealed glass. In addition, ...

Solar glass is a type of window and building material that is designed to block radiant heat transfer, which is basically the amount of heat from the sun that passes through ...

At its core, solar control glass is equipped with a metallic coating that reflects the sun's heat while permitting natural light to enter. This innovative technology plays a crucial role ...

Yes, it's highly effective in reducing heat gain and managing solar radiation. Its ability to reflect and absorb heat has been proven in both commercial and residential ...
