---

These electrochemical type capacitors are small in size and can offer capacitance in tens, hundreds, or even thousands of Farad. They cannot only store a large amount of charge, ...

Super capacitors work in much the same way but with a much larger "sponge," allowing them to store much more energy, which they release very quickly as and when required.

Super capacitors do not give off gas like lead acid batteries, but they cannot store as much power either. You can place capacitors in series or in ...

Super capacitors work in much the same way but with a much larger "sponge," allowing them to store much more energy, which they ...
