The discovery of a super-Earth orbiting beyond Saturn's distance in a distant solar system is more than just a milestone--it's a revelation. It reminds us that the universe is far ...

Super-Earths - a class of planets unlike any in our solar system - are more massive than Earth yet lighter than ice giants like Neptune and Uranus, and can be made of ...

The Solar System currently moves through a cloud of interstellar medium called the Local Cloud. The closest star to the Solar System, Proxima Centauri, is 269,000 AU (4.25 ly) away. Both ...

A new study published in the journal *Science* on April 24 reveals these "super Earths" frequently orbit their stars at distances comparable to or greater than Jupiter's position ...
