A common issue is when the UPS fails to power on, even when plugged in. This can be caused by a drained battery, faulty power connections, or an internal hardware fault.

Only through an inspection can you discover the inside of a UPS is deteriorating due to too much power supply ...

Here are some tips to help you out. Make sure your UPS is plugged in. If you have trouble turning it "ON", check if it is connected to an electricity source and that the breakers are not tripped. ...

Perform the check shown below if the UPS is operating abnormally. ... For the user's manual, refer to the Uninterruptible Power Supply (UPS) User's Manual (Cat. No. U702).
