Aside from the modes of operation, grid-connected inverters are also classified according to configuration topology. There are four different categories under this classification.

On-grid inverters, also known as grid-tied inverters, are designed to operate with the public electricity grid. These inverters convert the direct current (DC) generated by solar ...

A grid-tied PV inverter is designed to work with solar panels and synchronize with the electrical grid, while a regular inverter operates ...

Grid-forming inverters can start up a grid if it goes down--a process known as black start. Traditional "grid-following" inverters require an outside signal from the electrical grid to ...
