What is Albatros energy Mali?

Albatros Energy Mali S.A (AEM) independent private power project is a 90 megawatt (MW) heavy fuel oil power station built in Kayes, western Mali. It is Mali's first IPP to feed into the national grid. The power station consists of 6 Caterpillar diesel reciprocating engines. The project achieved financial close in June 2017.

How a decentralized energy supply works in Mali?

The small size and dispersed locations of villages in Mali for a long time made off-grid decentralized mechanical and electric energy supply the only viable option. A multifunctional platform consists of a 10-hp diesel engine that, as desired, can power a mill, a generator, a pump or other devices mounted on the same rail.

When did the Mali energy project close?

The project achieved financial close in June 2017. Construction commenced in July 2017, and was commissioned in October 31st 2018, ahead of schedule. It is providing a much needed sustainable energy source allowing an increased access to electricity for Mali's citizens and enabling industries to grow.

Will Coly energy move to Mali?

Also present in Benin and Ivory Coast, Coly Energy plans to consolidate its presence in the region by focusing on strategic partnerships and management adapted to local realities, an official of the company said. The future of this transition, however, remains dependent on the group's ability to meet economic and social expectations in Mali.
