With wind power integrated into the power system on a large scale, the system has become vulnerable to the frequency stability issue. The battery energy storage system (BESS) ...

With the increasing demand for frequency regulation in new energy power generation systems, relying only on wind turbines or energy ...

This study proposes a novel approach to address the issues of inadequate frequency regulation capabilities and increased fatigue loads in wind turbines operatin

Participating in the primary frequency regulation of the system with the energy storage auxiliary wind turbine can further reduce the depth of the system frequency drop and ...
