---

This article reviews the design of algorithms for wind turbine pitch control and also for generator torque control in the case of variable speed turbines. Some recent and possible future ...

Wind turbine control systems are typically divided into three functional elements:

Working in close partnership with turbine and gearbox manufacturers, the company supports wind turbine development through ...

The study also shows the feasibility of closed-loop wind farm flow control in constantly changing, partially observable wind conditions using a combination of model-based and data-driven ...
